

Wesley Learning Center
ENRICHMENT PROGRAM
SCIENCE CLASS

September 2015

The students will work like a true scientist during the class. They will learn that scientists have a special way of working; they use a series of steps called the Scientific Method.

The young scientists will learn to look at something and watch it. They will be asked: "What do you see?" "What does it do?"

They will think of a questions about the item they are watching; such as "What is it like?" "Why is it like that?" "How did it get that way?" The children will try to answer those questions. They will do a test to determine if they are right.

We will do simple, fun experiments each week to introduce the magic of science to your children.
